

Design and safety features

Avec tous mes remerciements à l'Autorité Monétaire de Hong-Kong pour son aide précieuse et son autorisation de reproduire les lignes qui suivent.
With all my thanks to the Hong Kong Monetary Authority for its invaluable assistance and permission to reproduce the following lines.

The ten-dollar polymer note resembles the ten-dollar paper note, retaining some of its security features while adopting some of the new security features unique to polymer notes. Security features of the ten-dollar polymer note :

FRONT

VERSO

1. Transparent window

- A transparent window with a number 10.

2. Shadow image of the bauhinia flower in the transparent window

- Watermark image of the bauhinia flower integrated in the transparent window.

3. Digital shadow image 10

- A watermark image of the number 10 is visible when viewed with background light.

4. Change of colour

- The colour of the ribbon on the transparent window changes between pink and purple when the note is tilted or examined against a light and dark background.

5. Transparent image

- When the note is viewed with a background light, the patterns on the front and back of the note align perfectly to give a complete picture of the horse.

6. Hidden name

- The number 10 appears when the note is tilted.

7. Reflective tape

- A shimmering band showing images of the bauhinia flower and "HK10" when the note is tilted.

8. Enlarged number

- The number 10 has been enlarged and made easier to feel.
